The ATHENA ADVANTAGE

Evidence and Measurement Based Care (EMBC)

Athena practices evidence and measurement based care. This requires periodic monitoring of clinical progress and obtaining patient feedback on specific measures to improve the quality and effectiveness of treatment so that the care delivered is tailor-made to meet each patient's unique needs.

Using their years of experience, our experts have developed assessment software tools like Cogtest and Comprehensive Outcome Measurement and Psychological Assessment Scoring System (C.O.M.P.A.S.S.). These comprise different scales for assessment and diagnosis, such as

- Biopsychosocial assessment (BPS)
- Patient Health Questionnaire (PHQ 2 and PHQ 9)
- Generalized Anxiety Disorder Scale 7 (GAD 7)
- 36-Item Short Form Survey (SF 36)
- The Process of Recovery Questionnaire (QPR)
- Young Mania Rating Scale (YMRS)
- Sovereign Reasons, Motivation, and Readiness-for-Change Scale (SRMR)
- The Stages of Change Readiness and Treatment Eagerness Scale (SOCRATES 8A and SOCRATES 8D)
- Adult ADHD Self-Report Scale (ASRS)
- Sovereign Outcome Rating Scale (SORS)
- Behavior and Symptoms Identification Scale (BASIS-24®)
- Sequenced Treatment Alternatives to Relieve Depression (STAR*D)
- Alcohol Use Disorders Identification Test (AUD-C)
- Generalized Anxiety Disorder (GAD-2)
- VitalSign6 for depression screening and treatment

Evidence-Based Treatment (EBT) Strategies

Rapport / Working Alliance	Cognitive Model	Treatment Goals Discussion / Consensus	Psychoeducation
Cognitive Restructuring	Positive Self-Talk	Problem Solving Skills	Social / Communication Skills
Provider Modeling of Skills / Behaviors	Pleasant Activity Scheduling	Self-Monitoring and Rewards	In-Session Practice / Role Play
Perspective Taking	Mastery Activity Scheduling	Relaxation Training	Family Training Reinforcement
